_____ delivery of the body
_____ cut cord
_____ crowning
_____ suction as needed
_____ delivery of placenta
_____ delivery of the head
 4. Briefly describe the management of a patient with abdominal and pelvic trauma.
-
-

5. Stabilizing the pelvis: Match the following steps with the correct photo on page 23 of the workbook.

_____ Lift the knees approximately 6 to 8 inches or the position of comfort and place a blanket or other padded material under the knees prior to strapping the patient down.

_____ Lift the patient carefully into the toboggan or transport device. Again, a bridge lift is best.

_____ Perform a bridge lift. Place the patient on top of the sheet or the commercial binder so it is 1 to 2 inches below the iliac crests. Logroll only if absolutely necessary since doing so can cause more internal bleeding.

_____ Finish securing the patient to the backboard or stretcher.

_____ Prepare the commercial pelvic binder or folded sheet and place it beside the patient on the backboard, or stretcher, that is being used as a litter. Place it where the supine patient's pelvis will be. If possible, dig out the snow or material under the pelvis and slide the device under the patient and apply.

_____ Because this is a distracting injury, apply a collar and head blocks and use SMR (with the padding under the knees).

_____ Fasten the binder: a) *If using a sheet*, draw the two ends of the sheet together over the symphysis pubis, compressing the hips (greater trochanters) together. Then tie the sheet ends together snugly using an overhand knot. Plastic ties are in some cases better than using an overhand knot if available.

6. Using the photos on page 26 of the workbook, indicate which items are suitable to treat heat-related illnesses, by placing the corresponding numbers under each photo. Some may be used more than once.

Not suitable = 0

Heat syncope = 1

Heat cramps = 2

Heat exhaustion = 3

Heat stroke = 4

- a. Provide shade _____
